

Statement

Arctic Paper Group Decarbonization Strategy

Arctic Paper has finalized its Group-wide decarbonization strategy in 2025 including Rottneros AB, setting clear greenhouse gas emission reduction targets across Scope 1, Scope 2, and key Scope 3 categories. The strategy is based on 2024 as the base year, the first year with full and consistent emissions data for the entire Group and is aligned with the Science Based Targets initiative (SBTi).

By 2030, Arctic Paper Group commits to reducing Scope 1 and 2 emissions by 42% compared to 2024. In addition, the Group commits to reduce absolute Scope 3 GHG emissions from purchased goods and services, fuel- and energy-related activities, upstream transportation and distribution, and end-of-life treatment of sold products by 25% within the same timeframe.

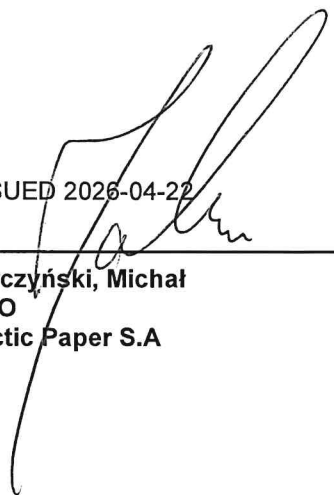

The strategy focuses on practical and deliverable actions, including deep decarbonization of fossil fuel-based processes, increased utilization of renewable energy sources in production, continued energy efficiency improvements, and close cooperation with suppliers of key raw materials such as wood, pulp and chemicals.

Arctic Paper will monitor progress on an annual basis and continue to enhance emissions data quality and transparency, ensuring credible delivery of its climate commitments and contribution to the transition toward a low-carbon economy.
